

**EXPNO 11: CREATE A CLONING OF A VM AND TEST IT BY LOADING
THE PREVIOUS VERSION/CLONED VM.**

AIM:

To create a cloning of a vm and test it by loading the previous version/cloned vm.

PROCEDURE:

STEP 1: Open VMware Workstation and select the existing virtual machine.

STEP 2: In the Clone Virtual Machine Wizard, click Next.

STEP 3: Select the current state of the virtual machine as the source and click Next.

STEP 4: Enter a suitable name for the cloned virtual machine and select the storage location.

STEP 5: Click Finish to start the cloning process.

STEP 6: Wait until the cloning process is completed successfully.

STEP 7: Open the newly created cloned virtual machine in VMware Workstation.

STEP 8: Power on the cloned VM and verify that the guest operating system loads successfully.

STEP 9: Test the cloned VM and verify that it works independently from the original virtual machine.

.

IMPLEMENTATION:

RESULT:

Thus, a full clone of the virtual machine was successfully created, loaded, and tested using VMware Workstation.
